

Comtrade Unified API Platform

Comtrade Unified API platform addresses key pillars of today's API economy - APIs. With software de facto taking over the world, one application at a time, application programming interfaces (APIs) can have a positive effect on organization's profitability, agility and general performance. What is an API then? It is a customer interface for technology products that allows software components to communicate.

At Comtrade Digital Services we take APIs a few steps further. We have created a platform that unifies everything that is of great importance to a modern business. Comtrade Unified API platform provides a single interface across many APIs, data sources and services and allows you to create "bridges over new found waters" almost instantly. It makes it possible for any organization to get creative and innovative in adapting its business solutions to new needs and demands no matter where they emerge.

→ Unified APIs

INNOVATIVE

Fast production track for **new front-end** functionalities.

ADAPTIVE

Learn how to use APIs and create functions based on your wants and needs.

PSD2 COMPLIANT

Be ready for regulatory and/or industry standard changes.

→ Create New Opportunities

Modern business offers several opportunities for organizations that don't stand still and want to create something new or something better. In the world where market trends are rapidly changing and new players are disrupting even the most established business models, every organization has to adapt to constant changes. An effective way to get ahead of competition is by innovating, reframing business models and services.

Technological innovation create new opportunities and new possibilities. By using Comtrade Unified API platform, an organization can easily and rapidly innovate and introduce new features, functionalities or services into its business and business solutions.

→ Benefits

Unified API platform is your answer to:

- Business innovation
- Adaptability and compliance
- Competitive advantage
- Fast time to market

API Economy Delivers:

- Automation
- Value and quality
- Data integration
- Unlimited possibilities and scalability

➔ Missing a Piece of the Puzzle? Just Take Ours.

Digital Darwinism takes adaptation to whole another level. Organizations must adapt to new market conditions as fast as possible in order to best serve their customers and their needs. Meeting client's expectation can be tricky as their demands can be few but far in-between.

Comtrade Unified API platform allows you to address the client needs in the fastest and best way possible - by integrating APIs and extending your own solutions/services.

Comtrade Unified API platform can be used for transforming or adding storage, pre-processing, interfacing and other functionalities (such as security) to your own core business solutions. It can also be used as an engagement platform. Our Unified API platform also enables banking without walls as it is fully compliant with the revised Payment Services Directive (PSD2). Creating truly digital and transparent (financial) services and apps has never been easier.

Comtrade Smart Transformation platform

➔ Achieve Compliance

By integrating new APIs, organizations can fulfil regulatory demands quickly, especially in heavily regulated industries such as finance. The building blocks of the API economy are at the same time also very transparent, so achieving compliance - however deep or wide it may be - is made even easier.

➔ Shorten Time to Market Significantly

Improving product's or service's time to market can have significant business impact. Comtrade Unified API platform enables fast adoption of several components and functionalities and therefore critically reduces time to market. Comtrade Digital Services's preassembled and automated solutions help with instant value creation as well.
